[**Rational point - Wikipedia**](#)

In number theory and algebraic geometry, a rational point of an algebraic variety is a solution of a set of polynomial equations in a given field. If the field is not mentioned, the field of rational numbers may be understood. For example, $(3/5, 4/5)$ is a rational point on the circle $x^2 + y^2 = 1$.

[**Rational points on algebraic varieties - University of Bristol**](#)

Rational points on algebraic varieties. Lattice points in a circle Introduction. Lattice points in a circle / Rational points on P^1 $P^1(Q) = \mathbb{F}_x = (x, 0)_x$

[**Dymocks - Rational Points on Algebraic Varieties by ...**](#)
