Alkali metal, any of the six chemical elements that make up Group 1 (Ia) of the periodic table namely, lithium (Li), sodium (Na), potassium (K), rubidium (Rb), cesium (Cs), and francium (Fr). The alkali metals are so called because reaction with water forms alkalies (i.e., strong bases capable of neutralizing acids).

This principle is well demonstrated in the reaction of an alkali metal with water. Below is the generic form of an alkali metal (represented by M) with water and the chemical reaction for potassium metal reacting with water. The alkali metal added to water makes hydrogen gas, alkali ions, and hydroxide ions.
