[The Langlands Classification and Irreducible Characters ...](#)

This monograph explores the geometry of the local Langlands conjecture. The conjecture predicts a parametrizations of the irreducible representations of a reductive algebraic group over a local field in terms of the complex dual group and the Weil-Deligne group.

[Langlands classification - Wikipedia](#)

In mathematics, the Langlands classification is a description of the irreducible representations of a reductive Lie group G , suggested by Robert Langlands (1973). There are two slightly different versions of the Langlands classification.

Over local fields this is expected to give a
parameterization of L-packets of admissible irreducible
representations of a reductive group over the local field.
For example, over the real numbers, this correspondence is
the Langlands classification of representations of real
reductive groups.
